

Bosch Video Management System

Securing your future with IP

Bosch Video Management System (VMS) manages all your IP and digital video and audio streams, plus all the security data being transmitted across your IP network. The sophisticated application software has an easy-to-use interface, letting you manage any number of Bosch IP, DVR and Allegiant elements simply and quickly. With Bosch VMS you can control and configure your entire system from a single location. Flexible and future-proof, Bosch VMS gives security managers, IT personnel and operators more control over their surveillance set-ups, from the smallest to the very largest installations.
